

Interested in integrating ShakeAlert® Earthquake Early Warning technology into your organization's systems and facilities?

Contact a Technical Engagement Regional Coordinator!

Technical Engagement Regional Coordinators are available to answer your questions about ShakeAlert. These ShakeAlert team members help companies and community lifelines to develop and implement ShakeAlert-enabled products and services. For organizations that want to build their own alert delivery system, Regional Coordinators can guide them through the licensing process and provide access to free testing and development resources. Regional Coordinators can also inform organizations about licensed-to-operate partners that can install ShakeAlert-enabled hardware and software.
